## Earned Value Example

๑ Planned to Manufacture:

- 100 Widgets
$\square \ln 5$ days
- For \$200

■ Status:

- End of Day 3
- 50 widgets manufactured
- $\$ 90$ spent

## Earned Value Example for details see PMBOK 7.3.2

■ EV: 50 widgets @ \$2ea = \$100
■ PV: (day 3) 60 widgets @\$2ea = \$120
ஏ AC: \$90
『 CV $=E V-A C=+\$ 10$
『 $S V=E V-P V=-\$ 20$

## Earned Value Example for details see PMBOK 7.3.2

$$
\begin{aligned}
& \text { ब } \mathrm{BAC}=\$ 200 \\
& \text { ब } \mathrm{EAC}=\mathrm{AC}+\mathrm{BAC}-\mathrm{EV}=\$ 190 \\
& \text { Assumes performance to plan } \\
& \text { ब } \mathrm{EAC}=(\mathrm{AC} / E V)^{*} \mathrm{BAC}=\$ 180 \\
& \text { Assumes continued variant performance } \\
& \text { ब } \mathrm{ETC}=\$ 100 \text { or } \$ 90 \\
& \text { ब } \mathrm{VAC}=\$ 10 \text { or } \$ 20
\end{aligned}
$$

## Earned Value Example for details see PMBOK 7．3．2

$$
\begin{aligned}
& \text { @ } E V=\$ 100 \\
& \text { 『 } \mathrm{AC}=\$ 90 \\
& \text { 『 } \mathrm{PV}=\$ 120 \\
& \text { 『 BAC = \$200 } \\
& \text { ஏ } \mathrm{CPI}=\mathrm{EV} / \mathrm{AC}=1.11 \\
& \text { ஏ } \mathrm{SPI}=E \mathrm{EV} / \mathrm{PV}=.83
\end{aligned}
$$

Assumes performance to plan
