**Define the role of deliverable acceptance in the PMBOK processes.**

The PMBOK defines acceptance criteria as “Those criteria, including performance requirements and essential conditions, which must be met before project deliverables are accepted.” The acceptance criteria are established in the requirements documentation during the “Collect Requirements” process (5.1) and included in the scope statement as outputs of the Define Scope process (5.2). This is then incorporated into the scope baseline in the Create WBS process (5.3). The “Perform Quality Control” process (8.3) ensures that deliverables will be acceptable to the customer per the agreed upon criteria, and those that are not compliant with established requirements are rejected, usually for rework, prior to being offered to the customer. The “Verify Scope” process (5.4) is the process that actively provides deliverables to the customer as an output. In this process, all deliverables are provided to the customer for formal acceptance. The customer can accept as is, accept with changes, or reject for rework. When the customer formally accepts the deliverables they sign the acceptance documentation, which is forwarded to the Close Project process (4.6).
