

Requirements
Backyard Privacy Fence
Bill Carswell
March 1, 2010

This backyard privacy fence is being built for two purposes:

1. Create a privacy barrier from the neighbors
2. Prevent animals from coming into the yard and eating the garden plants

We have chosen a 6'-tall wooden privacy fence of standard construction.

The requirements for the fence are:

1. The fence shall be a standard, 6'-tall wooden privacy fence common to the area
2. The fence posts shall have the carved, pear-shaped pointed tops
3. The fence shall have arched tops between the posts
4. There shall be two gates, one for vehicles and one for people only
5. The vehicle gate shall be to the left of the house, as viewed from the road
6. The people gate shall be to the right of the house
7. The fence structure shall be laterally reinforced with three cross beams between fence posts rather than two
8. The fence shall stop three feet from the neighboring property lines to enable access for staining, painting and lawn care
9. The fence shall come with a 1-year materials warranty

Exclusions:

1. There will be no security system built into the fence
2. Installation team shall not hold homeowner responsible for safety during installation

Constraint:

I leave for the Middle East on April 1 and will be gone one month. Payment will not be made until I have made a visual inspection of the fence.
