

Planning Process Group Artifacts

4.2 Develop Project Management Plan

4.2.3 Project Management Plan (Output)

PMGT 690, ERAU, Prof. Sherman

By: Matthew Holtan

4.2.3 Project Management Plan (Output): This portion of this Group Project taken from PMGT 612. It summarized the developing of the project management plan and what is all included in the plan itself.

Developing a Project Management plan for a failing project

This project management plan for this project in Mexico will deal more with the human element. Some the inputs from other various processes to support the project management plan to look closely at in this project would be: communication management plan, process improvement plan, and the quality management plan.

The communication management plan is to provide relevant, accurate, and consistent project information to project stakeholders and other appropriate audiences. By effectively communicating the project can accomplish its work with the support and cooperation of each stakeholder group. The process improvement plan is indicative of continuous process improvement. This plan documents the steps for analyzing processes with the purpose of improving the process. The quality management plan outlines the standards and what is acceptable level of work. This includes customs and courtesies, standards and procedures throughout the plant. These are just a few of the highlighted areas in developing the project management plan for this failing project.

The project management plan may be either summary level or detailed, and may be composed of one or more plans. Some or all of the subsidiary plans can be included in the project management plan (PMI, 2013, pg 78). They differ from the other project documents. Other project plans to be included in the project management plan, that was not mentioned from the above artifact are:

- Change Management Plan

- Configuration Management Plan
- Cost baseline
- Procurement Management Plan
- Risk Management Plan
